DETAILED ACTION

.1. Claims 24-27, 29-34, 37-41, 52, and 54-58 were pending at the time of the issuance of the previous Office Action, mailed October 2, 2007. By the latest response from the applicant, filed April 2, 2008, claims 24-27, 29-34, 37-41, and 52 are cancelled. Therefore claims 54-58 remain pending and have been examined.

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 54 and 55 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claims are directed towards, respectively: a system for transmitting information, and a system for decoding and reproducing encrypted electronic information. However, neither claim sets forth a limitation that explicitly recites any hardware element of the system. Additionally, the Applicant's specification, at for example page 23 second paragraph, makes it clear that the invention may be embodied in software run on a personal computer. The Specification states: *"Note that the present invention may be implemented by a commercially-available personal computer or the like having prestored therein the operating program and various data."* Therefore, claims 54 and 54 must be considered as setting forth computer program code that directs a processor to carry out the steps specified. However, the claims do not specify

that the computer program is embodied in a computer-readable memory medium.

Therefore the claim sets forth only functional descriptive language and is non-statutory since this does not fall into one of the classes of invention eligible for the grant of a US patent. Unless embodied in a computer-readable medium the software in and of itself cannot be considered as a computer component, and hence cannot effect a change of state of a processor to produce a useful or tangible result. From 2106.01: Computer-Related Nonstatutory Subject Matter: *Descriptive material can be characterized as either "functional descriptive material" or "nonfunctional descriptive material." In this context, "functional descriptive material" consists of data structures and computer programs which impart functionality when employed as a computer component. (The definition of "data structure" is "a physical or logical relationship among data elements, designed to support specific data manipulation functions." The New IEEE Standard Dictionary of Electrical and Electronics Terms 308 (5th ed. 1993).) "Nonfunctional descriptive material" includes but is not limited to music, literary works, and a compilation or mere arrangement of data. Both types of "descriptive material" are nonstatutory when claimed as descriptive material per se, 33 F.3d at 1360, 31 USPQ2d at 1759. When functional descriptive material is recorded on some computer-readable medium, it becomes structurally and functionally interrelated to the medium and will be statutory in most cases.*

Allowable Subject Matter

4. Claims 56-58 are allowed.
